

The company GRADHERMETIC is one of the few companies worldwide that can offer an integrated production process.

This allows us to control the entire value chain of products, thus guaranteeing the very highest quality standards. Starting with stock aluminum and after a comprehensive manufacturing process (melting furnaces, casting, hot-rolling, cold-rolling, tension levelling, continuous painting lines, cutting lines, profiling and assembly), we obtain the end product, whose quality is controlled and verified by our approved laboratories.

The product SUPERGRADHERMETIC contain minimum 90% of recycled material.
All the recycle process is by Gradhermetic.

A red circular stamp with the text "GRADHERMETIC S.A." around the top and "TERRASSA" at the bottom. In the center, there is a smaller oval containing the word "GRADHERMETIC". A blue ink signature is written over the stamp.
